PROJECT DETAILS :

1) PROJECT NAME: Lead Marketing Software (LMS)

Description: Leadership The **Marketing Work Tracker Module** is designed to help marketing employees log and manage their daily activities. It provides an easy-to-use interface for recording day-to-day tasks such as client visits, lead generation, calls made, meetings attended, promotional activities, and feedback collected.

This module helps managers monitor employee performance, task completion, and campaign effectiveness, while allowing employees to maintain a structured record of their marketing efforts

Technology Use: REST API's, PHP, Javascript, AJAX.

Roles & Responsibility :

- Record daily activities like client visits, calls, and meetings in the software
- Update task status as pending, in progress, or completed
- Add new leads and update their status
- Set reminders for follow-ups

2) PROJECT NAME: SCHOOL ERP Software

Description: The **School ERP Software** is a comprehensive solution designed to manage all academic and administrative activities of a school efficiently. It streamlines processes such as new admissions, fee collection, issuing certificates like Bonafide and Leaving Certificate (LC), attendance management, exam scheduling, and report generation.

This software enables school staff, teachers, students, and parents to interact on a single platform, improving transparency, communication, and overall school management efficiency. It supports automation of routine tasks, reducing paperwork and manual errors, while providing real-time data access and reporting

Technology Use: REST API's, PHP, Javascript, AJAX.

Roles & Responsibility :

- Requirement gathering from the school and understanding their needs
- Designing the system architecture, database, and user workflows
- Developing frontend and backend of the software

- Testing the software to find and fix bugs
